Point	Description
1	External Comb Boilers-Industrial
2	Fiberglass Resin Products
3	Cold Solvent Cleaning/Stripping
4	Open Top Vapor Degreasing
5	Surface Coating Appl - General
6	Surface Coating Large Aircraft
7	Surface Coating Miscellaneous
8	Petroleum Product Storage
9	Misc Industrial Processes
10	Conversion Coating of Metal Products
11	Internal Combustion Emergency Generators

Point	Segmen	Description
1	1	Residual Oil - Grade 6 Oil
1	2	Distillate Oil - Grades 1 & 2
1	3	Natural Gas - 10-100 Mmbtu/Hr
1	4	Natural Gas - Less Than 10 Mmbtu/Hr
1	5	Natural Gas - Greater Than 100 Mmbtu/Hr
2	1	General
3	1	Other Not Classified
3	2	Methyl Chloride
3	3	Isopropyl Alcohol
3	4	Freon
3	5	Acetone
3	6	Petroleum Solvent
4	1	Trichloroethylene
4	2	1,1,1 Trichloroethane
4	3	Freon
5	1	Adhesive Application
6	1	Topcoat Operation
6	2	Prime Coating Operation
6	3	Cleaning/Pretreatment
6	4	Coating Mixing
6	5	Other Not Classified
7	1	Anhydrous Ammonia
8	1	Fugitive Emissions
9	1	Miscellaneous - Other Not Classified
9	2	Anhydrous Ammonia
10	1	Alkaline Cleaning Bath
10	2	Acid Cleaning Bath
11	1	Emergency Generators

I. Background

Under 40 CFR Part 70 and 71 Boeing Seattle is required to perform a Potential to Emit Analysis to determine if it triggers a Title V operating permit for major sources of air pollutants. Title V threshold permitting would be triggered if any of the following conditions are present at Boeing Frederickson:

1. The major source threshold for any air pollutant is 100 tons/year (this is the “default value”).
2. Lower thresholds apply in non-attainment areas (but only for the pollutant that are in non-attainment). (See Table 1 below).
3. Major source thresholds for “hazardous air pollutants” (HAP) are 10 tons/year for a single HAP or 25 tons/year for any combination of HAP.

Table 1. Lower Major Source Thresholds for non-Attainment Areas.

Non-attainment Area Desig	VOC or NOx	CO	PM-10
Marginal	100 tpy		
Moderate	100 tpy	100 tpy	100 tpy
Serious	50 tpy	50 tpy	70 tpy
Ozone transport region	50 tpy (VOC only)		
Severe	25 tpy		
Extreme	10 tpy		

The following sections describe the potential to emit for air pollutants from the emissions units currently operating. The total emissions are summarized and a determination is made on whether PTE thresholds are triggered for Title V permit for each air pollutant.

PTE Summary

	PTE Emissions (lbs)							
	CO	**NOx**	**PM10**	**PM25**	**SO2**	**VOC**	**HAP**	**CO2e Metric ton**
EGENS	1,586	7,369	519	519	484	-	1,088	
Boilers	204,626	1,017,654	32,519	31,571	2,397	23,243	893	
Dust Collectors			180,206	180,206				
Painting Operations (From CAM)			184,000	184,000				
Total	206,212	1,025,022	397,243	396,295	2,881	23,243	1,981	-

	PTE Emissions (Tons)

Painting Operations (From CAM)	-	-	92	92	-	-	-	-
#1, #2 Petroleum Diesel (on-road - taxed)								
#2 Petroleum Diesel (untaxed)								
Motor Gasoline (on-road - taxed)								
Motor Gasoline (untaxed)								
Jet A / Jet Fuel (used in aircraft)								
Propane (used in stationary source)								
Propane (used in mobile source)								
Total	103	513	199	198	1	12		

Summary

Sources of Particulate Matter

	3-369 and 3-380		All Over Booths		Total
No Control - Tons per year	42		50		**92**
With 98% Filter Efficiency - Tons per year	0.8		1.0		1.8

Sources of Particulate Matter

	4-41 and 5-50	Dust Collectors + Tankline	All Over Booths		Total
No Control - Tons per year	20	90.1	50		**161**
With 98% Filter Efficiency - Tons per year	0.4	1.8	1.0		3.2

Notes

1) To be conservative control efficiencies were assumed to be 98% for all units. Most removal efficiencies are higher.

1) 2 dust collectors in service in Renton
2) Air flowrates derived from NOC application
3) Particulate rate of generation based on estimates in NOC or operational information
4) Estimated hours of operation obtained from NOC
5) Use of the dust collectors scaled up to 24 hrs/day 365 days/yr
6) Assume all solids are particulate, and if uncontrolled can be emitted into the atmosphere

Dust Collectors

BLG
2-88
DUC7460

1) What is the process generating the dust?
Wood dust from Wood Shop
2) What is the air flow rate in cfm?
7500 cfm
3) What is the gr/scf?
0.9 (Based on 8 hr operation/day)
4) What is the make/model of equipment?
MACVALV
5) Is the control device indoors or outdoors?
Outdoors
6) Are there any limitations to operations?
No
7) Who was interviewed, including phone number / pager, and the interviewee's Supervisor?
From NOC

Potential Particulate Emission Calculation

= **84** TPY PM

BLG
3-369
DUC039

1) What is the process generating the dust?
Chemical dust from Wastewater Treatment Tanks
2) What is the air flow rate in cfm?
500 cfm
3) What is the gr/scf?
0.9 (Based on 8 hr operation/day)

Potential Particulate Emission Calculation

Annual Amount = (50 lb/day)*(365 days/yr)*24/16 = **6** TPY

Total	pounds=	180,205.53	tons=	90	Tons/yr

The particulate limit for CAM is 100 tons or 200000 lbs/yr
Since the calculated potential to emit particulate for all dust collectors is less than the CAM limit for particulate, CAM requirements are not applicable to the dust collectors.

Boeing Seattle dose not have any autoclaves on site and therefore 0 lb emissions
